- (c) determining the level of binding of said labelled ligand to hER β in said test and control cultures; and
- (d) identifying as a hER β -interactive compound any compound that reduces the binding of said labelled ligand to hER β .
- 20. A method as defined in claim 19, wherein said ligand is 17- β estradiol.
- 21. A method as defined in claim 19, wherein said hER β -interactive compound is an agonist.
- 22. A method as defined in claim 19, wherein said hER β -interactive compound is an antagonist.

Please add the following new claims:

- 24. A method for identifying hERβ-interactive compounds, said method comprising:
- (a) contacting the polypeptide of claim 18, which polypeptide encodes hERβ, with a labelled ligand in the presence of test compounds, to form test reactions, and in the absence of test compounds, to form control reactions;
- (b) incubating said test and control reactions under appropriate conditions to achieve equilibrium binding of said labelled ligand to hER β ;
- (c) determining the level of binding of said labelled ligand to hER β in said test and control cultures; and
